DETAILED ACTION

Drawings

The drawings are objected to because insulative materials should be cross-hatched according to MPEP 608.02. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Figure 6 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Regarding claim 1, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention.

See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Bleich et al. (US 5,898,133).

Bleich et al. disclose an electrical cable comprising:

a conductor 14 made of an aluminum-based metal (Column 2, Line 42);

a heat resistant forming a cover for said conductor (Column 2, Line 48); and

said conductor is a single core wire.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art ("A.A.P.A.") in view of Bleich et al.

A.A.P.A. discloses the invention substantially as claimed including a conductor being pushed into an insulation displacement slot. A.A.P.A. does not disclose that the conductor is made from an aluminum-based metal nor that a welding

material/conductive adhesive is used at the contact portion between conductor and the insulation displacement slot.

Bleich et al. teach an aluminum-based conductor (Column 2, Line 43). It would have been obvious to one having ordinary skill in the art at the time the invention was made to choose aluminum as the conductor, since aluminum is a readily available conductor in the market.

Welding material/conductive materials are well-known in the electrical art to bond two electrically connecting metals. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a welding/conductive material between the conductor and insulation displacement slot to permanently bond the two together.
